Patient Name: Baby DIVISHA
 Referred By: Dr. SWASTIK MULTISPECIALITY HOS.
 Reg. no. 75307
 Collected on: 28/10/2025
 Age / Sex: 6 months / F
 Date: 28/10/2025
 Reported on: 28/10/2025 11:59 AM

A positive **NS1** test result confirms **dengue** virus infection without providing serotype information. A negative **NS1** test result does not rule out infection. People with negative **NS1** results should be tested for the presence of **dengue** IgM antibodies to determine possible recent **dengue** exposure.

Dengue IgG, IgM

IgG	Negative	
IgM	Negative	Negative

Interpretation :-

A positive **IgM** and **IgG** tests for **dengue** antibodies detected in an initial blood sample mean that it is likely that the person became infected with **dengue** virus within recent weeks. If the **IgG** is positive but the **IgM** is low or negative, then it is likely that the person had an infection sometime in the past.

Widal (Slide Method)

Tube agglutination test for Salmonella group of organisms reveal following titers.

	1/20	1/40	1/80	1/160	1/320
S TYPHI "O"	+	+	-	-	-
S TYPHI "H"	+	+	-	-	-
S PARATYPHI "AH"	-	-	-	-	-
S PARATYPHI "BH"	-	-	-	-	-

Comment: WIDAL TEST <NEGATIVE>

Antibody titre of 1:80 or higher suggests infection. A marked rise in the titre to one serotype to (above 1:80) or paired sample collected at 5 to 7 days interval is regarded as diagnostically significant. However persons who have received TAB vaccine may show high titre of antibodies to each of the salmonellae.
